

MiTOWER SHUTTLE

Hoist all materials safely and ergonomically to your workplace

- Lightweight
- Quick and easy mounting
- Operation by using only a cordless drill
- Safe hoisting of tools and solar panels

EN 1004-1

EN 1004-2

The Shuttle is a modular lift system that can hoist a load of maximum 130 lb using a winch. The Shuttle can be used on an MiTOWER rolling tower and consists of guide sections, a winch and several consoles. The guide sections can easily be clamped to the rungs and the winch can be operated using a cordless drill. The Carrier set allows you to hoist all the materials safely and ergonomically to your workplace on a scaffold. The Carrier set is delivered with its own console.
